DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 - 33, memory controller for controlling data write requests from plural requestors, classified in class 711, subclass 154.
- II. Claims 34 - 37, drawn to method of incrementing address for memory operations, classified in class 711, subclass 219.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed since independent claims in group I do not recite any of the features of group II at all. The subcombination has separate utility such as addressing interleaved memory.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2186
